Inventor was originally developed by Dassault Systèmes, but is now developed by Autodesk. A number of 3D modeling applications exist that use the ADM software. AutoCAD software is fully integrated with Inventor so that there is no need to use Inventor on its own. However, the reverse is not true. A 3D image of the design can be created or modified to help with design review and documentation. AutoCAD Architecture is available to all users on AutoCAD LT. AutoCAD Architecture is based on the STEP file format, which is an industry standard for transmission of 3D model data. The format, which is similar to the widely used STL format, was developed by The Open Group and has been used to archive drawings for decades.
