AutoCAD was initially aimed at architects, but has since expanded to become one of the world's most widely used CAD programs. AutoCAD is licensed primarily as an on-premises desktop application, with various free and open-source models. AutoCAD also runs in a SaaS model where software is delivered through a web-based app. The application can be licensed as perpetual, perpetual for life, or on-demand. On January 20, 2019, Autodesk announced that Autodesk AutoCAD 2018 software would be discontinued on April 3, 2019, and would not be receiving further feature and security updates. AutoCAD is a powerful yet easy-to-use desktop software that offers a variety of tools that allow you to create complex three-dimensional (3D) drawings. It can also be used for two-dimensional (2D) drafting, design visualization, and 2D/3D data exchange. AutoCAD is also available as a cloud service called AutoCAD 360. Although AutoCAD is primarily used by architects and other visual designers, it can be used to create many other types of drawings, including: Powerful features of AutoCAD enable the creation of sophisticated drawings with ease. With AutoCAD, you can create precise and accurate drawings with high quality and with minimal effort. You can easily save time by using AutoCAD's many powerful drawing commands that will produce optimal results. Read on to learn about the essential features of the AutoCAD software. 4 Essential Features of AutoCAD Depending on your design project, you may require features of AutoCAD that enable you to perform specific tasks. The following are the most important features of AutoCAD that you may need. 1. Draw 2D and 3D Objects The most basic feature of AutoCAD is the ability to draw a shape in two or three dimensions. Most AutoCAD users also need to prepare 2D plans to help in the construction of a building. You can use various tools, including two-point and three-point drawing tools, to create 2D and 3D objects. 2. Design 2D and 3D Visualization A good way to visualize the design of a building is to make a 3D model using the 3D modeling tools in AutoCAD. The 3D model enables you to design your project

An insert command automatically adds the points and creates a final drawing. When you start a new drawing, you get real-time updates about how your objects are registered. So if you know you will not make the final revision of your design, you can review the work in progress at any time. Automatic registration is available in all AutoCAD® 2020 and AutoCAD LT™ 2019 versions. Symbols and Annotations You can quickly search for a symbol and insert it in your drawing without needing to type. In addition to the previously available styles of text symbols, you can now insert symbols in the following formats: Point Circle Rectangle Polyline Arch Polyhedron The new type of symbol can be displayed in the same way as a text symbol: by using any of the standard text settings in AutoCAD or by using the Attach Annotations and Symbols command. The figure below shows the symbol settings for a point symbol. All other types of symbols follow the same settings as with text.
