English. English is a very natural language, anyone can read it, its like your native language in that way. Click to expand... When you say any other language than English you refer to other languages of the same language group (in this case you are referring to the language group of Indo-European languages, which includes English, Hindustani and Hindi). I can speak multiple languages of the same language group, but it does not necessarily mean I am conversant in all of them. And if someone who is native speaker of a language group and born reading that language can't understand me, how would you expect the non-native English speaking people to understand you? So the Hindi to English would be the other way around. English to Hindi Translator

Key Macro is a very simple application, developed using Visual Basic and AutoHotKey scripts. Its aim is to record any keyboard shortcut and the subsequent execution of a specific macro on a given date. This particular program runs on any version of Windows (XP, Vista, 7, 8, 10) and uses the Microsoft Windows registry to save the data you enter. The procedure is quite simple, from the main window, by clicking on the 'Add key' option you will be able to specify the desired shortcut (for example Ctrl+A), select a date of your choice and enter a new parameter (for example 3) that will perform the key sequence. A couple of nice options that appear inside Key Macro are the

possibility of renaming the macro and selecting the system to which it is applicable (all versions of Windows, OS X, iOS and Windows Phone, for example). The software uses the timestamp system to determine the correct date of the command and also allows you to choose which date comes in the first place. Key Macro is certainly a very useful application if you need to automate some of your most used keyboard shortcuts. The software is also compatible with other tools, like for example a PDF converter.
