The Eraser tool allows you to remove selected areas of an image. Often, the Eraser tool is used in combination with the Clone Stamp. The Gradient tool allows you to fill an area with a single, continuous color. This is a good tool for creating backgrounds and backgrounds with various textures. The Healing Brush tool allows you to repaint an image, filling any cracks and small gaps. If your image has serious damage, this tool can really help restore your image. The Paint Bucket tool fills or empties selected areas. This is a good tool for correcting color or sharpness issues and for painting over images that have objects in them. The Photoshop Blur effect is a very basic effect used to blur an image. The Marching Ants effect is a useful Photoshop tool for creating dynamic graphics. The Refine Edge dialog is a great tool for fine-tuning an image. This is a good tool for revising objects in an image, such as adding curves, reducing edges, and reducing size. The Spot Healing Brush tool is a great tool for quickly filling cracks, small holes, and other issues in an image. The Twirl and Wave tools create beautiful, organic, and flowing shapes from an image. The Liquify and Puppet Warp tools can be used for complex texturing of images. In this tutorial, we will show you how to use the Photoshop CS3 Liquify and Puppet Warp tools to create an organic, flowing portrait. These tools can be used for any purpose. They are especially useful for natural and organic images. They are also useful for creating digital paintings and art. Enter the Composite>New>Composite command and select the plus sign to convert the image into a selection. In this example, we have used our original image as a background for the subject. 1. Field of the Invention The present invention relates to a semiconductor device, and more particularly, to a package structure and a method of manufacturing the same. Although the present invention is suitable for a wide scope of applications, it is particularly suitable for mass production capable of reducing manufacturing costs. 2. Discussion of the Related Art A semiconductor chip packaging technology is a process of protecting a semiconductor chip from external environments and connecting the semiconductor chip to external circuit elements. In the semiconductor chip packaging technology, different package structures for a semiconductor chip have been suggested. For example, a method for forming a molded semiconductor package has been suggested to protect a semiconductor chip from external environments and increase heat dissipation efficiency. In the molded semiconductor package, as shown in FIG. 1, a semiconductor chip 18, such as a system on chip (SOC) or a memory chip, is mounted on a pad 11 of a lead frame 10. An underfill layer 16 is formed between the semiconductor chip 18 and the pad 11 of the lead frame 10 to fill a space between the semiconductor chip 18 and the lead frame 10. A sealing resin 15 is formed on the underfill layer 16 to cover the semiconductor chip 18. The sealing resin 15 is heated and cured to form a molded package structure. In the case of the molded semiconductor package having such a structure, a printed circuit board (PCB) serving as an external circuit element can be electrically connected with the pad 11 through the lead frame 10. In this case, the lead frame 10 serves as a carrier for the semiconductor chip 18. In the case of the above-described molded semiconductor package, the pad 11 of the lead frame 10 is made of a soft metal, such as silver, copper, or aluminum, to be easily bent, and the lead frame 10 is usually made of a metal material having low thermal conductivity, such as an epoxy resin or a polyimide resin. Therefore, heat dissipation efficiency of the semiconductor package is low. Thus, there is a problem in that a high power

semiconductor chip has a high temperature during a high-frequency operation. Accordingly, there is a need for a semiconductor package having a better heat dissipation efficiency.FIFA 17 tweaks to alternative free kick types (Player Ratings screen) According to the EA Sports FIFA 17 developer diary, there will be some changes to the alternative free kicks in the game.
