Differential expression of the *Torpedo californica* nicotinic acetylcholine receptor alpha1 subunit in CNS structures and peripheral tissues. In the present work we have analyzed the spatial and temporal distribution of the *Torpedo californica* nicotinic acetylcholine receptor (nAChR) alpha1 subunit in the central nervous system and in the peripheral tissues of the same organism using both immunocytochemical and in situ hybridization techniques. The nAChR alpha1 subunit is widely distributed in the peripheral nervous system and in the CNS, as both immunocytochemistry and in situ hybridization techniques evidenced a widespread staining. In the CNS, alpha1-positive elements are detected in all the cortex, striatum, thalamus, hypothalamus, and mesencephalon. Among these structures, the lateral, dorsal, and ventral pallium show high levels of alpha1-positive elements, but not in the tegmentum and the cerebellum. The alpha1-positive cells of the plexiform layers of the optic tectum and the cerebellum, the islands of the neural lobe, the cell bodies of the trigeminal and glossopharyngeal nerves, and some sympathetic ganglia also show strong immunoreactivity. In the peripheral nervous system, the alpha1-positive elements are located in ganglia of the sympathetic and parasympathetic systems, although the stained fibers are scattered in the neuropil of the peripheral sensory ganglia, whereas the alpha1-positive elements are abundantly found in the non-neuronal cells of the connective tissue of the skeletal muscle, the heart, the pharyngeal glands, and the salivary glands. Although the precise function of this receptor in the peripheral tissues is unknown, the complex expression pattern displayed in the current study suggests that the nAChR alpha1 subunit may play different roles in the CNS and the peripheral tissues. Immunomodulatory effects of different particulate fungal antigens in *Aedes aegypti* larval- and pupal-derived dengue-2 virus vaccine candidates. Attempts to develop dengue vaccine candidates have been hampered by the occurrence of adverse reactions. We have compared aqueous and particulate antigens extracted from the fungus *Trichophyton concentricum*, which is a proven larvicide and pupal growth regulator. Immune response to these antigens was tested in the d

Q: Resizing canvas in python for a website? I've been doing a lot of work with python recently and I'm running into a bit of an issue. I'm using the canvas and I draw stuff on it, sometimes

create multiple canvases and if I want to save the images, I need to resize it. I can only seem to do this for one image, like so: `image = tk.PhotoImage(file='testImage.jpg')` `canvas = tk.Canvas(bg='white', width=800, height=600)` `canvas.create_image((300,300), image=image)` `tk.PhotoImage('frame')` # run this to have an actual image # This works but the resizing is silly, # only making the image 1/3 or 1/4 of the size `frame = canvas.create_image((25,25), image=image)` # This fails with an `AttributeError` `frame = canvas.create_image((75,75), image=image)` I hope that's what people want to see since this is a major issue A: You can just use `canvas.configure(width=400, height=300)`. This will let you keep your photo size at the 75 by 75. from PIL import Image, ImageTk from Tkinter import \* `root = Tk()` `canvas = Canvas(root, width=400, height=300)` `canvas.pack()` # Create a PhotoImage object and associate it with a Canvas: `image = PhotoImage(file='testImage.jpg')` `canvas.create_image((300,300), image=image)` `tk.PhotoImage('frame')` # run this to have an actual image `frame = canvas.create_image((75,75), image=image)` `frame.configure(width=400, height=300)` `root.mainloop()` The present invention relates to the electrochemical treatment of sewage and more particularly to a method and apparatus which is useful for the removal of ammonia and other contaminants from sewage prior to its disposal by way of the oceans. The recent interest in the treatment of sewage, in particular the so called "detrital" sewage, has led to the development of many different systems for accomplishing this goal
