Specification: Free Download Publisher:Q: Colour scheme for QGIS 3? I'm learning QGIS and I had this idea about a colour scheme, which was nice and simple and would be easy to code. But I couldn't find an API or plugin to do this. Am I missing something? A: You can use CSS for this: Div { background-color: #ff0000; width: 100%; } Q: How to remove empty list elements from an array in Scala Here's an example array: val x = Array(List(1), List(2,3), List()) It's a list of three empty Lists. I'd like to remove all empty elements from this array to get an array of the following form: val x = Array(1,2,3) How do I do that in Scala? I don't care if I lose the order of elements. A: You can use findNonEmpty which takes a predicate and returns the first element for which the predicate holds. scala> val x = Array(List(1), List(2,3), List()) x: Array[List[Int]] = Array(List(1), List(2, 3), List()) scala> x.filter(!_isEmpty).toArray res0: Array[Int] = Array(1, 2, 3) Alternatively you can use the scala and functions: scala> val x = Array(List(1), List(2,3), List()) x: Array[List[Int]] = Array(List b7e8fdf5c8

Pitivi is a free video editor using the open source GStreamer framework developed by KDE. Pitivi is like other similar programs in that you create your video files, apply

transitions, and add a soundtrack, but it includes many more features that make it the professional option. You can use the timeline and the video list to create a video story with your own edits and transitions, and then save it using the simple export formats supported by GStreamer. Pitivi supports a wide range of advanced features when creating your videos and its interface is simple and intuitive, and makes it easy to do things you need or want without having to struggle with dozens of options. Pitivi offers a plug-in framework to allow any developers to create new filters and effects with GStreamer, or to create new sources for existing filters (which is how all of the work was originally done for GStreamer). Pitivi works with GStreamer 0.10 and higher. Best Video Editors for Linux 2016 Pitivi is also an excellent video editor for Linux with a huge following. Our favourite Linux Video Editor allows you to create your own professional-quality videos and with it you can produce highlights such as transition effects, transitions, and titles. The advantages of Pitivi are that you can create your own videos using images, themes and even URLs, and that it makes it easy to apply effects to video clips. You can also use the audio track as a guide for how the video plays. While Pitivi is a very good video editor it is only available for Linux, and we cannot recommend it as a Linux Video Editor for Mac or Windows users. It is a free video editor using the open source GStreamer framework developed by KDE. What is GStreamer? GStreamer is a framework that allows you to create programs that manipulate media. For example, you could write a program that turns images into an MPEG file, or even a program that changes the order of tracks on a CD. If you want to learn more about GStreamer, it's written in Python, and if you're interested in knowing more about Pitivi, it is also written in Python. It is supported by Free Culture and Open Source. Main features: Key features: - Video editor with a simplistic interface - Video handling: source, renderer, transitions and titles - Graphical movie editor - Audio editor (optional) - Media centre - Image converter - Converter of frames
