A novel mutation of the rhodopsin gene in a family with autosomal dominant retinitis pigmentosa: the R30C mutation associated with de novo DRP. The mutational analysis of the rhodopsin gene in a Greek pedigree with autosomal dominant retinitis pigmentosa revealed a novel mutation, R30C. The majority of patients from this pedigree had a familial history of the disease; three of them were clinically diagnosed with DRP, a condition that can become severe if not diagnosed and treated in a timely manner. To our knowledge, this is the second study describing the mutation R30C in the rhodopsin gene in a DRP family with a positive familial history for the disease. This emphasizes the importance of genetic testing of the rhodopsin gene in families with a high disease-susceptibility gene. Q: CakePHP: Showing a newsfeed model in a view? I've been struggling with this for the last few days and haven't found a straight answer anywhere. I'm building a simple newsfeed/wall app and am trying to add it to my views. I have a model called 'News' which contains all of my news articles. I have a table that is populated by news articles in 'News' and the model 'Activity' which allows me to log in and whatnot. I am trying to get the News model to show in the homepage of the site. The homepage shows all of the news articles that have been added to the newsfeed through the log-in system, but I can't seem to find the proper way to pass in the newsfeed model. I have tried: 1) Passing in the newsfeed model to the news model I created, which worked perfectly but doesn't seem to be the right thing to do. 2) Creating a b7e8fdf5c8
