Office 2010 (Toolkit And EZ-Activator) 2.0.1
Final 06.12.2010 | 15.17 MB

I'm looking for a way to do this by selecting the region of the file and not the entire file. A: I tried to apply what you said:

```
import bz2 for f in ["office
2010.bz2", "yazbuk.bz2",
"travel 2010.bz2"]: tmp =
f.rsplit("office 2010.bz2",
1)[-1] print("Getting the
file {} and extracting part
{}".format(f, tmp)) with
bz2.open(f, "rb") as fh:
data = fh.read() head, tail
```

```
= data.partition(tmp) data
    = head + tail
print("Done.")
```

Which gives me: Getting the file office 2010.bz2 and extracting part d1c7fe01c7867b53b30ced57ce618bb3 Done. Getting the file yazbuk.bz2 and extracting part 337 Done. Getting the file travel 2010.bz2 and extracting part 25f10d0bd7ae6e638ee92954f097f2cd Done. Even though the partitioning is correct, the final output is a string with the first part of the path, in this case the name of

the file. If you want to add that part to the filename just do:

```
import bz2
for f in ["office 2010.bz2",
         "yazbuk.bz2", "travel
         2010.bz2"]: tmp =
f.rsplit("office 2010.bz2",
1)[-1] print("Getting the
file {} and extracting part
{}".format(f, tmp)) with
bz2.open(f, "rb") as fh:
data = fh.read()
head, tail
= data.partition(tmp)
data
= head + tail
print("Done.")
os.rename("{}-part{}".
        6d1f23a050
```
