A: Perhaps the clue is in the title of the question. mDNSResponder - Host Listener Add-on for Finder mDNSResponder is a host listener (mDNS), a service on the Mac to allow you to have a little applet that will stick in the middle of your screen telling you which hosts are currently available. The Official Mac App Store Link to mDNSResponder mDNSResponder mDNS is an Internet standard for naming resolvable hostnames on a local host. Apple's mDNSResponder is a free and open source program for Mac OS X 10.6 and later that listens to mDNS requests over the network and displays the results in your System Preferences dialog box. Find out more. The Store Link above shows the only application that mDNSResponder is available for download. The link doesn't list the app as an application available for MacOS Sierra, but it is a host/listener for MacOS Sierra. A: Try this one, my wifi was always slow in past, then i got this software, now my wifi becomes faster than ever, you just need to download it, when you download it it will be a.dmg file then double click on it to install it Sections October 9, 2017 -- If you are a young or older person with type 2 diabetes, the risk of complications of this disease can be significantly reduced with better blood sugar control. For people with type 2 diabetes who are also obese or overweight, more aggressive weight loss leads to better blood glucose control, according to an analysis of data from the United Kingdom Prospective Diabetes Study (UKPDS) -- which found that type 2 diabetes occurs in more than 3 million people in the United States. The study, published in the Oct. 9 issue of JAMA, also found that among older people with type 2 diabetes, the likelihood of death from any cause decreased significantly as glucose levels improved (measured as hemoglobin A1c). However, in younger people with type 2 diabetes who are not obese, older people with type 2 diabetes who are obese, or people of any age who are not obese and have type 2 diabetes, better blood glucose control was not associated with a reduced risk of death or complications. "This study provides further evidence that tight glucose control can be safely done in most patients with type 2
