Epson L220 Resetter Rarl

The image comparison shows the Epson L220 with Film Processor resetter. The Epson L220 can process film in three different ways: by using the internal hopper, the automatic film processor or the external hopper. We will check the internal hopper first and then proceed with the automatic film processor. The following picture shows the internal hopper next to the automatic film processor. Although the pictures are not identical, the image quality is the same. The resolution is 1.7 dpi. The four lines in the bottom of the picture show the different types of film you can use. If you use Kodak, Fuji and Epson film for medium format, you will need the Epson INK cartridge. The scanner does not provide for films from other brands. Therefore, you should use the same brand as the color film you chose. When the Epson L220 is not in touch with the scanner, it automatically powers up the printer itself. This also works while the Epson L220 is connected to the computer. What you need to do is to put the scanner to sleep again. The AC adapter can be ejected to find the power switch. No installation is needed. The scanner can be connected to the PC directly with a USB 2.0 connection. It also be connected to a printer through a printer extension cord. The manual states that the Epson L220 can be reset and the settings can be adjusted. What does this mean? Well, it means that when the scanner is restarted, the image will be reset. This function is useful if you are not satisfied with the settings you chose. For more information, please refer to the manual. The next image shows the Epson L220 resetter's settings. The horizontal and the vertical oscillation is checked. It is possible to choose between all the settings on the scanner's menu. This is also the case for the settings below that. The resolution is set as well as the quality of the line scanner. The media menu shows the currently loaded medium. To scan for example an 11x14 cm image, a 30x25cm image or even a 4x6cm panorama, the software is selected accordingly. The next setting is for the dust and scratch correction. Again, you can easily adjust all of these options.
